

■ Liner Anode(Flexible Type)

Liner anode are flexible and can be assembled using MMO-Ti wire anode connected anode cable. The liner anode is packed in a fabric sleeve that is filled using coke breeze.

Wire Anode	Diameter [mm]	1.0	1.5	3.0
	Material	Grade 1 or 2 ASTM B863		
	Coating	Mixed Metal Oxide		
Current Output for 20Years [mA/m]		67	89	195
Sock Diameter [mm]		38		

* It is possible to achieve longer life by increasing coating density or reducing anode current density.

[Application]

U/G piping, U/G storage tank external
